Translating bedside data into board room information: How to transform raw data into meaningful information for healthcare leaders

Clinical Quality Insights

<https://www.greeley.com/insights/translating-bedside-data-board-room-information-how-transform-raw-data-meaningful>

Hospitals and other healthcare institutions struggle to interpret performance data, focus on meaningful “next steps,” and choose between competing priorities for improvement. It is more important than ever to present performance data to leaders in a format that will drive decisions and enable effective governance.

We'll be joined by Ken Rohde, President of KRRohde LLC, an independent consulting firm focusing on improving business effectiveness through technology-based approaches to tracking and preventing human errors, analyzing, modeling and managing risk and the overall cost of quality, effective communication of strategy and improving organizational safety and effectiveness. He has over 40

years of experience in quality management and has consulted at hundreds of healthcare facilities throughout the United States.

Our national experts in quality and safety will share:

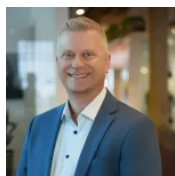

- Five practical tools to translate raw data into meaningful, action-ready information
- Four simple questions your data should answer for leaders
- Tools for visual analysis of graphs and charts
- Four-quadrant graphs to help visualize your data
- Effective methods to choose which of the hundreds of opportunities for improvement should float to the top of the priority list
